ABOUT ME

Final-year ICT (Software Engineering) Diploma student seeking a full-time internship starting late September 2026. Experienced in building full-stack responsive web applications, object-oriented systems, and low-code development. Strong collaborator with practical experience managing project life cycles in team environments.

PROJECT EXPERIENCE

Restaurant Ordering & Management System | Python

Co-developed a menu-driven CLI application to streamline restaurant operations across four distinct user roles (Manager, Customer, Cashier, Chef). Implemented specialized functions for order tracking, financial reporting, and digital recipe management. Built a lightweight data persistence layer using flat text files while mapping system data efficiently via Python dictionaries and tuples

APU Supervision Management System | Java

Co-developed a standalone desktop application using Java to automate university academic supervision and appointment tracking workflows. Architected a multi-role ecosystem supporting Students, Supervisors, Faculty Admins, and System Admins to handle registration, scheduling, automated feedback, and report generation. Built a graphical user interface (GUI) using Swing/AWT components backed by a secure text-file data-handling system.

Eco-Ride: Peer-to-Peer Carpooling Web Application | HTML, CSS, JavaScript, PHP, MySQL

Co-developed a responsive carpooling website to manage campus ride-sharing logistics. Implemented a multi-role web platform for Riders, Drivers, and Admins to coordinate route listings, track progress, and handle secure user registrations. Constructed the full-stack system using HTML, client-side JavaScript validation, and custom PHP backend data processing linked securely to a MySQL database, designing a 100% custom, framework-free responsive UI from scratch using native CSS media queries.

Popular Bookstore Website Redesign | Figma

Redesigned the Popular Bookstore e-commerce platform to improve its navigation and interface. Developed complete UX assets including user personas, journey maps, interactive user flows, and a Figma design system after benchmarking market competitors. Delivered a high-fidelity prototype as the final product.

EDUCATION

ASIA PACIFIC UNIVERSITY (APU) - EXPECTED GRADUATION: SEPTEMBER 2026

- Diploma in Information & Communication Technology with a specialism in Software Engineering
 - CGPA: 3.85/4.0
-

SKILLS

- Programming Languages: HTML | CSS | JavaScript | PHP | SQL | Python | Java
- Tools & Platforms: Visual Studio Code | SQL Server Management Studio | JVM | Joget | Figma | Canva | PyCharm | Dify AI
- Core Competencies: Full-stack Development | Object-Oriented Programming (OOP) | Low-Code Development

LANGUAGES

- Chinese
- English
- Cantonese
